

STANDARD PUMP TANKS

BY HCCP

FOR USE WITH LARGER VOLUME PRO FLO© SYSTEMS

We keep a large inventory of our standard septic and pump tanks in stock and ready for delivery ranging from 500 - 3000 gallons which can be installed with the 750 GPD and 1500 GPD systems per design requirements. Following are diagrams of each of these septic tanks, each of which is also offered as single compartment pump tanks, with both standard and traffic lids. All of our tanks can be customized as needed and built with Tuf-Tite© risers cast into the lids per design needs.

Please note that the 2850 gallon septic tank, when built as a pump tank, has a liquid volume of just over 3000 gallons to the bottom of the inlet and comes standard with an 8" traffic bearing lid.

All of our tanks, including the 2000 and 3000 gallon pump tanks, are one piece tanks with no joints below the liquid depth. All 4 inch walled heavy duty tanks are ASHTO H-20 rated to the depths indicated on the diagrams.
