IMPORTANT NOTICE!!

We are seeing more multiple tank systems where the sand pad under the tanks is being “stepped down” for purposes of aligning the inlets/outlets of tanks.

Our experience has shown that it is difficult to stabilize a sand pad of this kind and we have seen several instances of tanks being broken if the sand pad shifts causing uneven support of the tank.

HILL COUNTRY CONCRETE PRODUCTS, INC. STRONGLY RECOMMENDS THAT “STEPPED DOWN” SAND PADS BE AVOIDED AT ALL COSTS AND WILL NO LONGER WARRANT TANKS SET ON UNEVEN SAND OR GRAVEL PADS.

Please note that we recommend that the bedding material be only washed sand or pea gravel. Any other material used for the bedding is done so at the customer’s risk and will void Hill Country Concrete, Inc.’s express limited warranty set forth at the front of this catalog and on the reverse of our invoice.

Quality you can build on since 1978
